DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 6-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over US 2002/0111431 to Kajiwara et al.

This patent shows latex compositions for dip molded articles as those claimed, see the abstract and [0001]. The use of the claimed diene, nitrile and acid monomers in the percentages is shown in Table 2. The MEK insoluble limitation is met by the disclosure at [0027]. The difference between the claims and the patent is the patent fails to show the metering of the monomers wherein the starting monomeric blend is has portions of each monomer and the remainder of the monomer is added when the polymerization is between 5 and 95%. This patent does show the use of a seed polymer which is seen to render obvious the initial polymer feed claimed see [0063]-[0065]. One of ordinary skill would find the relative percentages of monomers prima facie obvious given their disclosure as being suitable amounts and the use in the seed polymerization.
